How Ativan Helps

Ativan is a benzodiazepine that works on the central nervous system to calm excessive brain activity, helping with:

- Generalized anxiety disorder
- Panic attacks
- Insomnia and sleep disturbances
- Muscle spasms and tension
- Relief from back, muscle, & nerve pain

John, for example, noticed that a **1mg Ativan tablet** at bedtime helped him fall asleep faster and manage daytime anxiety, improving his focus and productivity.

Common Side Effects of Ativan

While effective, Ativan may cause side effects:

- **Drowsiness or fatigue** – Avoid driving after use.
- **Dizziness or lightheadedness** – Rise slowly from sitting or lying positions.
- **Weakness or muscle relaxation** – Be cautious when performing physical tasks.
- **Nausea** – Can occur in some individuals.

- **Dependence risk** – Use only as prescribed.

Thanks to **Same-Day Doctor Approval**, licensed providers monitor your treatment to minimize risks and provide dosage adjustments if necessary.
